SGD Auto-Sweep Account

As of 31st October 2026

KEY FEATURES

The Auto-Sweep Account is suitable for investors seeking a higher yield for their idle cash while waiting for the next investment opportunity. The discretionary portfolio can be diversified across cash, money market funds and short duration bond funds. It aims to potentially provide higher returns than the FSM Multi-Currency Cash Account.

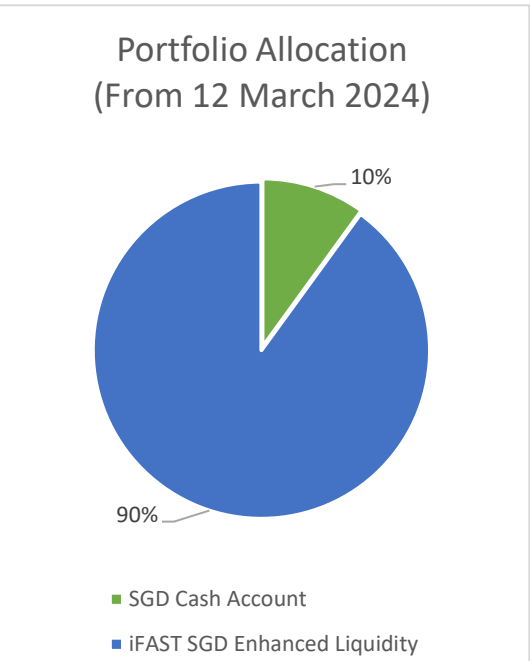

INVESTMENT OBJECTIVE

This portfolio aims to produce a return higher than Cash Account while maintaining a high degree of liquidity and capital preservation. The portfolio does not pay out dividend from the underlying investments. The target allocation may change with our views on the financial markets and the interest rates environment.

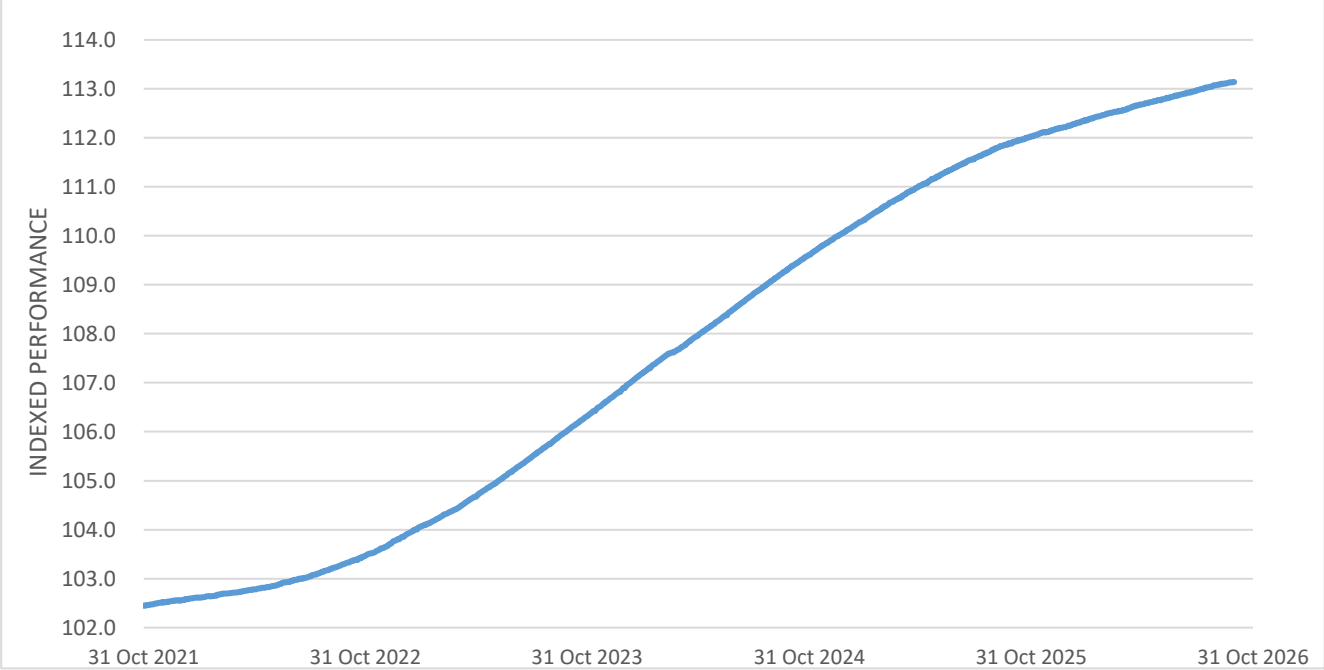

PORTFOLIO INFORMATION

Inception Date	07 June 2019
Management Fee (per quarter)	0.05%
Dividend Treatment	Reinvest
Min Initial/Subsequent Top-Up	$50 / $50
Min Recurring Top-up	$100
Min Withdrawal/Retention	$50 / $ 0

Cash	SGD Cash Account	0 – Lowest Risk

FUND DESCRIPTIONS

iFAST Financial Pte. Ltd. is the manager of iFAST SGD Enhanced Liquidity Fund. This fund is a sub-fund of iFAST Investments Select Series VCC.

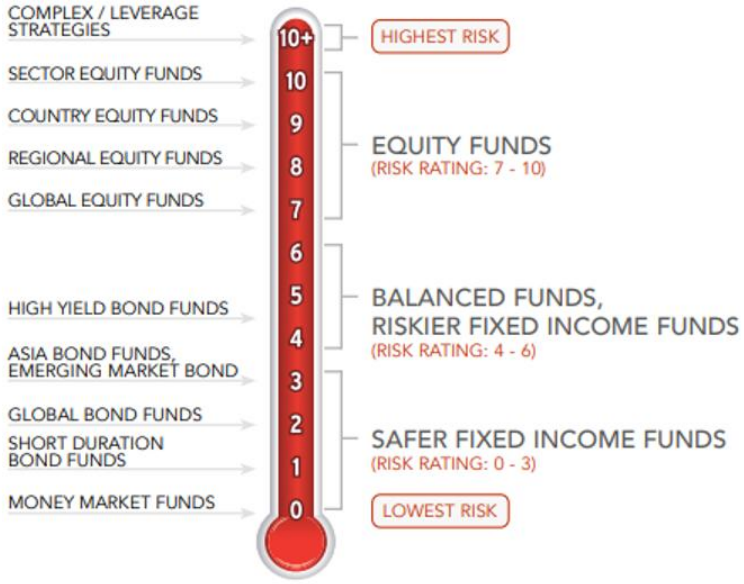

The fund investment strategy is to invest in a high quality debt instruments including bonds, notes, bills, deposits, and other debt securities. The fund may also invest in money market funds. The fund targets to maintain a weighted average portfolio credit rating of A- and a weighted duration of around 12 months. There is no target industry or sector and the fund is not country-specific.

The portfolio's base currency is SGD and foreign currency-denominated securities will be fully hedged back to SGD except for a 5% frictional currency limit (to account for possible deviations from a 100% hedge). This may be done through direct investment or through investment in the Underlying Funds.

RISK RATING OVERVIEW

RISK RATING METHODOLOGY

At iFAST Financial Pte Ltd, we assign funds a risk rating from 0 to above 10. This reflects our assessment of each fund's risk relative to other funds on our platform. Factors considered for each fund include: the type of securities held, geographical and sector diversification, and the extent of derivatives usage. The scale is ordinal: a fund rated 4 is more risky than one rated 2, but is not necessarily twice as risky.

Lowest to Lower Risk (Risk Rating: 0 - 1)

Money market funds invest in short-term fixed income products, including Treasuries, bank deposits, and/or other low-risk money market instruments. This makes them among the lowest-risk products on our platform. We generally assign a rating of '0' to money market funds. Short-duration bond funds generally have lower sensitivity to interest rates than medium or longer-duration bond funds. We therefore mainly assign these funds a risk rating starting from '1'.

Low Risk to Moderately Lower Risk (Risk Rating: 2 - 3)

Other bond funds typically have risk ratings starting from '2'. On the lower risk scale, we have bond funds invested into bonds from a diversified number of markets, including developed markets where credit risk is relatively low. Bond funds with a narrower geographic focus, such as Asia or Europe, are typically more exposed to region-specific credit, political and policy risks, which may warrant a slightly higher risk rating.

Moderately Low Risk to Moderately High Risk (Risk Rating: 4 - 6)

For funds focused on sub-investment-grade bonds, including emerging market bond funds with significant high-yield exposure, the risk of credit deterioration and default is generally higher. We therefore believe these funds warrant higher risk ratings, starting from '4'.

Additionally, Balanced funds generally receive risk ratings from '4' to '6'. These ratings fall between that of most bond and equity funds, reflecting their investments into both asset classes. The eventual risk rating depends primarily on their geographical diversification, and their strategic asset allocation between equities and bonds. A higher allocation to bonds would generally support a lower risk rating.

Moderately Higher Risk to Very High Risk (Risk Rating: 7 - 10)

Equity funds tend to generate higher long-term returns compared to bond funds, but are also generally exposed to relatively higher volatility and drawdowns. The risk ratings for equity funds usually begin from '7' for globally diversified equity funds. Funds which are invested in a major region would be assigned a risk rating of '8'.

Funds that invest in the riskier emerging markets, such as the Asian and Latin-American region, are rated '9' and above. In addition, funds which invest in specialised industries or sectors (e.g. technology funds) are usually rated '10' due to concentration risk. Funds which invest in single emerging economies will face greater political risk as well as foreign exchange risk, while sector-specific funds face greater industry-specific risks. Therefore, they are assigned a risk rating higher than that of regional or global equity funds.

Highest Risk (Risk Rating: 10+)

Risk ratings of 'above 10' are reserved for funds whose risks exceed those normally captured by the conventional 0 – 10 scale, typically those that employ extensive leverage, invest in illiquid or highly opaque assets, or exhibit extreme price volatility due to the nature of their underlying investments. These include, but are not limited to, funds investing in cryptocurrencies, private market assets, and hedge fund strategies that utilise complex investment techniques and high levels of leverage to enhance returns.

Risk Disclosure Statement

Investing involves risk, including possible loss of principal invested. View the List of Risks as included in this factsheet.

Investment Risk – Past performance is not necessarily indicative of future performance. The value of the underlying investments and the returns derived from them can fluctuate and decrease or increase. There can be no assurance, and no assurance is given, that the portfolio will achieve its investment objectives. There is also no guarantee of repayment of capital.

Market & Credit Risk – The value of the portfolio's investments may go up or down due to changing economic, political or market conditions.

Concentration Risk – The portfolio may invest in instruments that may have concentrated holdings in a single asset class, country or sector. This may lead to higher volatility.

Currency Risk – The portfolio can be exposed to different currencies. Changes in foreign exchange rates could create gains or losses.

Currency-Hedging Risk – For hedged-share classes funds, while the fund attempts to hedge currency risks, there can be no guarantee that it will be successful doing so.

Interest Rate Risk – Change in interest rates may adversely affect the value of the assets held by the portfolio.

Implementation Risk/Execution Risk – The performance of the portfolio may differ from the indicative yield due to a number of factors such as cash flows, portfolio reweighting and timing differences.

Counterparty Risk – The risk of loss due to a counterparty not honouring a commitment, which may cause the value of the portfolio to fall. Counterparties include custodians, brokers and settlement houses. A counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the portfolio's underlying fund(s), potentially creating a partial or total loss for the underlying fund.

Fixed Income Securities And Downgrade Risk – The portfolio may be exposed to the credit/default risk of fixed income securities that its underlying funds invest in. In the event of bankruptcy or default of an issuer, the portfolio may experience losses. The actual or perceived downgrading of a rated debt security could decrease its value and liquidity and may have an adverse impact on the portfolio.

Credit And Sovereign Debt Risk – The portfolio may invest in bonds issued or guaranteed by governments or authorities, which may involve political, economic, default or other risks

Gating Risk – The underlying assets in the portfolio may be subjected to redemption gating, which could be triggered by restrictions or limitations imposed by the investment manager or regulatory authorities. This may lead to delays in redemption to the portfolio under such circumstances.

Important Information

The above portfolio is managed by iFAST Financial Pte Ltd ("IFPL"), which is licensed to deal in securities, providing custodial services, discretionary portfolio services and financial advisory services. All information presented is compiled from sources believed to be reliable and current, while accuracy cannot be guaranteed. This document should not be construed as an offer, solicitation, investment advice, research or recommendation by IFPL on the relevant portfolio. The portfolio's investment return and principal value will fluctuate where an investor's units when redeemed, maybe worth more or less than their original cost. Current performance may be lower or higher than the performance quoted here. Track records are based on model performance and do not represent actual client accounts. There are inherent limitations with model portfolios, such as the limited impact of market factors related to executing trades or liquidity, among other limitations. The target results are not an indicator of the returns a client would have realised or will realise in relying on the portfolio.
